AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, adiagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P additionally. N may be used to produce the colon cancer-associated Ps. by inserting the nucleic acids into a host cell and culturing the cell of the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; ss.

(h) assessing the aggressiveness or indolence of prostate cancer in a

                                                                                                                                                                                                                                                                                   prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Metalloprotease, IGS5, infection, pain, cancer; diabetes; obesity; anorexia; bulmia; asthma; Parkinson's disease, acute heart failure; hypotension; hypertension; urinary retention; osteoporosis; angina pectoris; myocardial infarction; stroke; ulcer; allergy; benign prostatic hypertrophy; migraine; psychotic disorder; neurological disorder; autism; multiple sclerosis; alzheimer's disease; neurodegenerative disease; sleep disorder; epilepsy; kidney disease; cardiovascular disease; arteriosclerosis; cerebrovasospasm;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      subarachnoid hemorrhage; cerebral ischemia; cerebral infarction; peripheral vascular disease; Raynaud's disease; motility disorder; gastrointestinal disorder; gastric emptying; gastroparesis; diarrhoea; inflammation; chemotherapy induced injury; tummour invasion; immune disorder; arthritis; endotoxin shock; sepsis; diabetes mellitus; severe mental retardation; dyskinesia; Huntington's disease; gilles de la Tourette's syndrome; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
                                                                                                                                                                                                                                                         Novel isolated nucleic acid molecule associated with cancerous state
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid molecule (I) companies of the nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The invention relates to an isolated, enriched, or purified protease polypeptide (I) and polynucleotide (II) encoding (I). (I) may be used to screen for substances (S) that may modulate its activity. Administering 8 (which modulates protease activity in vice of 10 may be used to treat a disease or disorder selected from cancers (e.g., of tissues, of blood or haematopoletic origin, of the breast, colon, lung, prostrate, cervical, brain, ovarian, bladder or kidney), immune-related diseases and disorders; cardiovascular disease, brain or neuronal-associated diseases (e.g., central or peripheral nervous system diseases, migraine, pain, sexual dysfunction, mood disorders, attention disorders, cognition

Novel protease polypeptide useful for screening for substances that may be used to treat, e.g., cancers, immune-related diseases, e.g., cancers, e.g., psychotic and inflammatory

disorders, hypotension, hypertension, psychotic disorders, neurological disorders and dyskinesias), metabolic disorders and inflammatory disorders. (I) may also be useful as a diagnostic tool for a disease or disorder such as those above. AAS97159-AAS97195 represent human protease coding sequences and primers of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Metalloprotease; IGS5; infection; pain; cancer; diabetes; obesity; anorexia; bulimia; asthma; Parkinson's disease; acute heart failure; hypotension; hypertension; urinary retention; osteoporosis; angina pectoris; myocardial inarction; stroke; ulcer; allergy; bendgn prostatic hypertrophy; migraine; psychotic disorder; neurological disorder; autism; multiple sclerosis; Alzheimer's disease;

```
The invention relates to an isolated human protease polypeptide (PRTS).

PRTS protein and DNA are useful for diagnosing, treating and preventing gastrointestinal disorders (gastriis, cirrhom's disease),

anomia, asthma), cardiovascular disorder (atherosclerosis, hypertension, myocardial infarction), cell proliferative disorders (hepatitis, cancer, psoriasis), developmental disorders (Cushing's syndrome, hypothyroidism), epithelial disorder (vitiligo, keloid, eczema), neurological disorders (epilepsy, Alzheimer's disease, Pick's disease, Huntington's disease, protein is useful in a number of dung screening techniques and to analyse the proteome of a tissue or cell type. PRTS DNA is useful for creating knockin humanised animals or transgenic animals to model human cathing subsection the protein germline gene therapy and in microarrays utilising fluids or tissues from patients to detect altered PKIN expression. The present sequence is human PRTS-13 CDNA.
                                               Human, protease, PRTS-13; enzyme, gastritis, cirrhosis, Crohn's disease; gastrointestinal disorder; autoimmune; inflammatory, cell proliferative; cardiovascular; developmental; epithelial; neurological; reproductive; AIDS; Acquired Immune Deficiency Syndrome; allergy; rheumatoid arthritis; anaemia; asthma; atherosclerosis; hypertension; myocardial infarction;
                                                                                                                               hepatitis, cancer; psoriaais; Cushing's syndrome; hypothyroidism; eczema; epilepsy; Alzheimer's disease; Huntington's disease; Parkinson's disease; Pick's disease; infertility; vitiligo; drug screening; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ŝ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  treatment of gastrointestinal, cardiovascular, autoimmune/Inflammatory, cell proliferative, developmental, epithelial and neurological disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Lee EA, Khan FA;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 3, 1

circles were made in vitro Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 985608-986759, 1101192-1101959, and 1217928-1220615).
